KAWEAH DELTA HEALTH CARE DISTRICT BOARD OF DIRECTORS
QUALITY COUNCIL
Thursday, June 20, 2024
5105 W. Cypress Avenue
Kaweah Health Lifestyle Fitness Center Conference Room

ATTENDING: Board Members: Michael Olmos (Chair), Dean Levitan, MD; Gary Herbst, CEO; Keri Noeske, Chief Nursing Officer; Tom Gray CMO/CQO; Julianne Randolph, OD, Vice Chief of Staff and Quality Committee Chair; LaMar Mack, MD, Quality and Patient Safety Medical Director; Sandy Volchko, Director of Quality and Patient Safety; Ben Cripps, Chief Compliance and Risk Management Officer; Evelyn McEntire, Director of Risk Management; and Kyndra Licon, Recording.

OPEN MEETING – 7:30AM

1. Call to order – Mike Olmos, Committee Chair

2. Public / Medical Staff participation – Members of the public may comment on agenda items before action is taken and after it is discussed by the Board. Each speaker will be allowed five minutes. Members of the public wishing to address the Board concerning items not on the agenda and within the jurisdiction of the Board are requested to identify themselves at this time. For those who are unable to attend the beginning of the Board meeting during the public participation segment but would like to address the Board, please contact the Board Clerk (Kelsie Davis 559-624-2330) or kedavis@kaweahhealth.org to make arrangements to address the Board.

3. Approval of Quality Council Closed Meeting Agenda – 7:31AM
   a. Quality Assurance pursuant to Health and Safety Code 32155 and 1461 – Julianne Randolph, DO, Vice Chief of Staff and Quality Committee Chair;

4. Adjourn Open Meeting – Mike Olmos, Committee Chair

CLOSED MEETING – 7:31AM

1. Call to order – Mike Olmos, Committee Chair
2. Approval of May Quality Council Closed Session Minutes – Mike Olmos, Committee Chair; Dean Levitan, Board Member

3. Quality Assurance pursuant to Health and Safety Code 32155 and 1461 – Julianne Randolph, DO, Vice Chief of Staff and Quality Committee Chair; Mara Miller, PharmD BCPS, Medication Safety Coordinator

5. Adjourn Closed Meeting – Mike Olmos, Committee Chair

OPEN MEETING – 8:00AM

1. Call to order – Mike Olmos, Committee Chair

2. Public / Medical Staff participation – Members of the public wishing to address the Committee concerning items not on the agenda and within the subject matter jurisdiction of the Committee may step forward and are requested to identify themselves at this time. Members of the public or the medical staff may comment on agenda items after the item has been discussed by the Committee but before a Committee recommendation is decided. In either case, each speaker will be allowed five minutes.

3. Approval of May Quality Council Open Session Minutes – Mike Olmos, Committee Chair; Dean Levitan, Board Member

4. Written Quality Reports – A review of key quality metrics and actions associated with the following improvement initiatives:
   4.1. Leapfrog Fall 2024 Safety Score Review Report
   4.2. Renal Services – Network 18 Quality Report
   4.3. Subacute Quality Report
   4.4. Trauma Services Quality Report
   4.5. Health Equity Quality Report

6. Value Based Purchasing – A review of completed and planned initiatives to identify and address Value Based Purchasing. Erika Pineda, Quality Improvement Manager.

8. Adjourn Open Meeting – Mike Olmos, Committee Chair
In compliance with the Americans with Disabilities Act, if you need special assistance to participate at this meeting, please contact the Board Clerk (559) 624-2330. Notification 48 hours prior to the meeting will enable the District to make reasonable arrangements to ensure accessibility to the Kaweah Delta Health Care District Board of Directors committee meeting.

**Process Measure Domain Score:** -0.0039
**Outcome Measure Domain Score:** -0.3691
**Process/Outcome Domains - Combined Score:** -0.373
**Normalized Numerical Score:** 2.627
**Hospital Safety Grade (Letter Grade):** C

*Data taken from Midas system which is not an apples to apples comparison to CMS
CMS is not updating PSIs and HACs in July report used for Fall 2024 Safety Grade for undisclosed reason

**Letter Grade Key:** A = >3.133 B = >2.964 C = >2.476 D = >2.047

More than medicine. Life.
Kaweah Health Scores on the Spring 2024 Grade

Process items that we did not achieve full points in Spring and Fall 2024 (if not addressed):

- Hand Hygiene (current score 40/100)
  - Loss of 30 points for not having 200 HH observations per month (missed Nov 2023 in Mental Health; auditors confused because of BioVigil installation), We will not have an opportunity to gain these points until October 2024; survey would have to be resubmitted and this new score would reflect on Spring 2025 safety grade
  - Loss of 30 points because we do not validate HH compliance manually on all shifts, all days of week.
- Safe Practice 6 – Culture, Measurement, Feedback & Intervention (current score 110/120)
  - Loss of 10/120 points due to lack of follow up meeting with Chief and units with safety scores. Leapfrog indicates attendance rosters and meeting notes must be submitted if validation is requested

Outcome Measures not achieving at least national mean in Spring 2024, will continue for Fall 2024 safety grade:

- All Healthcare Acquired Infection Measures (CAUTI will be above National Mean for Fall 2024 safety grade)
- Both PSIs included in score: PSI4 and PSI90 (CMS has not released performance that will be used in Fall grade)
Questions?

The pursuit of healthiness
**Unit/Department Specific Data Collection Summarization**

Quality Committee

**Unit/Department**: Kaweah Health Dialysis Facility  
**QComm Report Date**: 4/26/2024

**Measure Objective/Goal**: Medical outcome goals for data reported via CrownWeb and outlined by CMS Quality Incentive Program

**Date range of data evaluated**: Mar 2023 – Feb 2024

**Analysis of all measures/data**: (Include key findings, improvements, opportunities)

Medical outcomes measured include
- Adequacy of dialysis
- Anemia management, including transfusions
- Infection prevention and control
- Ultrafiltration and fluid management
- Nutrition
- Vascular access
- Medication reconciliation
- Hospitalizations and readmissions
- Process audits
- Patient satisfaction (ICH CAHPS appendix A)
- CMS QIP Score and Payment Incentive program (Appendix B) = NO payment reduction for coverage year 2024.

**Unit/Department Specific Data Collection Summarization**

**Quality Committee**

*If improvement opportunities identified, provide action plan and expected resolution date:*

- Recent loss of adequacy results seen. Retraining in adequacy protocol will take place.

- Anemia management has seen some improvement yet room for improvement remains. Newer drugs are being looked at.

- Immunizations are adequate. Access and blood stream infections are near expected levels.

---

### Transfusions:

---

Please submit your data along with the summary to your PI liaison 2 weeks prior to the scheduled report date.
• We have implemented improved monitoring of fluid management.

• Nutrition parameters are improved, remain suboptimal in our patient population (a safety net facility). Registered dieticians are on constant monitoring.

• Vascular access type remains suboptimal, a chronic, often discussed, unsolved conundrum. An access coordinator works exhaustively with patients.

Please submit your data along with the summary to your PI liaison 2 weeks prior to the scheduled report date.
- Hospitalizations and readmissions occur more frequently than expected, in part due to patient population, readmissions improved.

- Medication reconciliation consistent:

*Please submit your data along with the summary to your PI liaison 2 weeks prior to the scheduled report date.*
• Process audits are ongoing and result in staff education when deficiencies noted

• Patient satisfaction remains high see Appendix

**Next Steps/Recommendations/Outcomes:**
Each of these outcomes is measured and reviewed monthly. Action plans reviewed and applied monthly.

The primary concern that I have is an apparent fall off in adequacy measures. This needs correction immediately. It is in part due to the vascular access issue. Ideally the access of choice is an arteriovenous fistula created 6 months prior to the need for dialysis. This burden lies squarely with the patient’s nephrologist if chronic kidney disease has been recognized and referral to a nephrologist has been made. More than half of our patients do not have a nephrologist of record before admission to the Medical Center in need of urgent dialysis.

CMS Infection Event Data Submission Requirements

It is required to document peritoneal dialysis infections for all patients when these events occur. The information below details requirements for infection data submission.

Data Submission Requirements

Included Infections
While additional infections may be required at a later date, patient data for the following infection event is currently expected: ● Peritonitis

Submission Process and Timeframe
In event-based submissions, submitters are required to provide patient data regarding infections only when an infection event occurs. Anytime a qualifying event occurs, the facility should submit data within 90 days of the event. However, users can continue to edit and/or add additional data after submission to enhance data quality and completeness.

Users can save data entry progress within the module and return later to complete the remaining required fields until it is ready to be submitted. Data within the Infections module remains editable even after submission.

Level of Detail by Infection
It is expected that as much detail as practical is provided for all infections. It is expected that facilities should be able to report full details for infection events that occurred at the facility. For
infection events which occurred at another provider or via self-report, as much detail as available is expected.

**Nested Fields and Table Formatting**

Conditional fields (sub-fields that appear conditionally based on the response to the main field) are highlighted in grey in the table below. The cells are darker the more “nested” they are under the top-level field. The maximum level of nested fields is four.

Sub Acute and Short Stay SNF Specific Data Collection Summarization
Professional Staff Quality Committee

Unit/Department: Sub Acute and Short Stay SNF   Report Date: April 2024

Measure Objective/Goal:
1. Falls (internal data)
2. Pressure Injuries (internal data)
3. Psychoactive medication use (MDS/Casper)

Date range of data evaluated:
Data evaluated populated from internal data as well as CASPER report period: 7/01/2023 – 12/31/2023. Data compared with Casper Report and QTR 3 2023 through QTR 4 2023, internal data.

Nationally benchmarked quality data is collected through the MDS submissions process to CMS where data is populated into the CASPER report. CMS divides data between short-stay cases (<100 day length) and long-stay cases (>100 day length). The Skilled Nursing program client group is predominately in the short-stay category. Statistically this means that Long-Stay measures typically have a denominator of 33-34. Short-Stay measures typically have a denominator of 200+. Internal data is based on total units of service and does not differentiate based upon length of stay. There is no comparable national bench-marking of Short Stay cases for falls, and for HAPI prevalence overall. For these two indicators, we assess ourselves to internal performance goals.

FALLS
Analysis of all measures/data: (Include key findings, improvements, opportunities)
The rate of falls per 1000/pt. days in 3Q23 and 4Q23 totaling 0.32 falls per 1000 patient days. Facility observed percent for falls for long stay patients in the most current CASPER report is 3.3%, remaining well below national average of 43.7%, placing the program in the top 1 percentile nationally.

**If improvement opportunities identified, provide action plan and expected resolution date:**

Staff continues to participate in district-wide initiatives for fall prevention including Falls University to identify trends and communicate “take-aways”. Falls occur most commonly with our short-stay population, this skilled nursing units has many patients who participate in physical and occupational therapy sessions with varying functional levels. Therapy sessions are designed to promote mobility and independence ultimately preparing the residents to discharge home. The Short Stay unit utilizes several interventions, such as adding fall review during staff meetings for educational purposes and increasing the availability of fall prevention equipment such as tele sitters and chair alarms.

**PRESSURE INJURIES**

**Analysis of all measures/data:** *(Include key findings, improvements, opportunities)*

Incidence of new or worsening pressure ulcers for short stay patients, which would include Sub Acute patients with a length of stay under 100 days, as reported on the Casper report is 0.0 %, below the national average of 2.7 %.

Patients at high risk for pressure ulcers (long stay residents, defined as high risk, who have > stage II pressure ulcers) is 14.3%. This is a decrease from 16.1% in the last report. The definition for this long stay quality measure asks if a wound is present, not if acquired in the facility. This is particularly challenging in a program that preferentially admits cases with pressure ulcers for ongoing treatment. The measure triggers a flag until the wound completely heals (and through the 6-month period). Very large wounds that have healed down to very small, chronic wounds will continue to trigger this measure. Thus, it is common to see a delay in improvement on the CASPER report, while seeing improvement more immediately in our internal data.

Overall, the total wound rate for the two SNF units per 1000/pt. days for Q3 and Q4 2023 was 0. This is equal to the last report of 0. Both SNF units participate in Kaweah health Clinical Skin Institute when pressure injuries are discovered on the unit, staff capture skin injuries during routine assessments and preventative measures are implemented early leading to better patient outcomes.
If improvement opportunities identified, provide action plan and expected resolution date:
We will continue to work within the high standards of the District, with close management of our fragile, chronic wound cases, collaborating closely with the Kaweah Health wound nurses and utilizing the standardized treatment sets available to us.

UBC teams for South Campus nursing are reviewing clinical cases using a Peer review methodology to assess for and remediate practice concerns.

During the first two weeks of admission meeting in south campus, patients at high risk for developing pressure ulcers are discussed with the IDT and treatment teams and preventative options are implemented.

Any wounds that are present and worsening wounds or pressure ulcer are discussed shift to shift during safety huddles for all SNF units. Weekly summaries are done for patients to identify high risk patients for developing pressure sores.

PSYCHOACTIVE MEDICATION USE
Definitions/Assumptions:
This measure is collected through the Minimum Data Sets that are completed and submitted to CMS at the defined intervals by the program. The data includes only the information regarding prescribed medications by drug category (not by intended use or indication). Therefore, for instance, a practice change in the use of anxiolytics like lorazepam to antipsychotics like quetiapine for ventilator management would affect this data directly.

Increased use of medications in the antipsychotic drug-class for management of depression is also impacting our results in these measures. Antianxiety and hypnotic medication use is not reported as a quality measure for the short-stay population. The data is collected through the
MDS, but is not included in the measures that make up our quality ranking. All values are expressed in percentile rankings.

**Analysis of all measures/data: (Include key findings, improvements, opportunities)**

**Short Stay residents (<100 days)** Antipsychotic medication use for short stay patients is below the national average, which measures only cases with newly prescribed antipsychotics. The short stay patients who begin a new anti- psychotic during their stay is 0% for both 3Q23 and 4Q23, compared to the national average of 2.0%

![Graph showing Antipsychotics Med (%) over time]

**Long Stay residents.**

The facility percent for antipsychotic use in long stay residents for 3Q23 14.3% and 4Q23 is 18.5% compared to the national average of 14.8% (55th percentile) and 14.9% (77th percentile) respectively. Unlike the short stay measure, which only includes newly prescribed antipsychotics, the long stay measure includes all patients on the medication for any portion of the time (even if it was a home medication). Included in this measure are medications like quetiapine, used for depression or for ventilator management cases. There is another instance where our target client group for long-term care (Sub Acute program) is the primary driver of our performance.

SNF leadership has been working closely with the medical team and our MDS nurses to ensure that appropriate psychiatric diagnoses are captured in the medical record whenever possible. A small number of these diagnoses are excluded from this quality measure.
Long Stay residents.
Antianxiety/Hypnotic Medication use for long stay residents has remained high at the 99th percentile for 3Q23 and 4Q23, consistent throughout the year. This is reflective of the use of these meds for our ventilated patients in the subacute unit. There are no exclusions for medical diagnosis for this measure.

If improvement opportunities identified, provide action plan and expected resolution date:
Psychotropic medications are under constant scrutiny by CMS. Concerns around these medications are primarily founded in two concepts:

1. Inappropriate or excessive use of medications
2. Using psychotropic medications to control behaviors (as a chemical restraint) or for more convenient management of difficult patients.
3. Informed consent for psychotherapeutic drugs.

While the majority of our client group has clear and compelling indications for these agents, we continue to monitor the medications very closely. Our LTC pharmacist plays an important role in helping us ensure we track these medications closely during the transition process. Our primary focus is unnecessary medications, like prn hypnotics, hence we also monitor for the potential to reduction when possible.

All residents receive a monthly medication regimen review and physician consultation by our LTC pharmacist and Medical Director. This close partnership has helped reduce psychoactive medication used generally, including dose reduction practices.

There have been no findings around inappropriate use of psychotropic medications in any of our programs, including the most recent CMS recertification survey in March 2024.

II. Risk-Adjusted Mortality

Expected rates are estimated based on statistical models and take into account the risk profile of patients cared for in your center. The TQIP Average column displays summaries based on data from all TQIP hospitals and can be used as a point of reference for your center-specific results.

Observed rates and expected rates shown below can only be used to approximate the odds ratio due to model factors which account for risk-factor effects, sample size, data transformations, and outcome variability.

Table 2: Risk-Adjusted Mortality by Cohort

TQIP Mortality

Opportunity

• TQIP is the Trauma Quality Improvement Program part of the American College of Surgeons. They look at the mortality rate for our patients in three areas: all patients > 65 years old and isolated hip fractures.

• Since our last TQIP report, we have increased our Mortality rates.

Solution

• We have been reviewing all our mortalities and looking for trends. This measure continues to be developed.

• We are working with EMS to ensure they bring in appropriate patients. The EMS agency has a policy for their staff that states which patients should be brought to the facility and those that stay at the scene. When we find questionable cases, we send them to the EMS agency for review.

• Monthly staff education with the trauma registrars.

• Autopsy reports from our coroner’s office.

Measures

• We will use the bi-annual TQIP report for our data and review our mortalities monthly.

Next Steps

We will continue our monthly mortality reviews and follow up with any identified educational opportunities.
Door to Transfer

Early transfer is defined as ED or hospital transfers out of your institution occurring within 12 hours from ED/hospital arrival.

The TQIP Average column displays summaries based on data from all TQIP hospitals and can be used as a point of reference for your center-specific results.

Table 5: Risk-Adjusted Average Time to Transfer

<table>
<thead>
<tr>
<th>Cohort</th>
<th>Patients</th>

<tr>
<td></td>
<td>N</td>
<td>Observed</td>
<td>Expected</td>
</tr>
<tr>
<td>Early Transfer</td>
<td>211</td>
<td>152</td>
<td>130</td>
</tr>
</tbody>
</table>

Opportunity
Transferring Trauma patients for a higher level of care on average for our facility is observed to be 22 min on average longer than TQIP expects to transfer a patient. (Previous TQIP report we were observed 27 min on average longer, 5 min improvement)

Solution
Completed items: Early Recognition, Transfer Algorithm, and Monthly Dashboard

Transfer destination list: Creating a comprehensive transfer destination list and ranking trauma centers in California from closest to farthest is a significant step. This tool empowers our transfer center nurses with a clear roadmap for efficient patient transfers.

Transfer guidelines: Transfer center leadership is finalizing transfer call center guidelines so that staff understand patient transfer expectations.

Measures
We utilize our trauma registry program to measure the time from the patient’s arrival to departure. We are required by the ACS to monitor all transfers out of our facility.

Next Steps
A thorough review of the 211 charts that TQIP has identified as transfer cases. This review will focus on data abstraction and delays in initiating transfers.
SBIRT is the process of screening patients for alcohol abuse utilizing our CAGE questionnaire and providing them with referrals for treatment in the event they have positive screen results.
Opportunity

During our last review, it was identified that we did not have a process for identifying patients who suffer from alcohol abuse and referral for treatment when they are identified.

Solution

**EMR:** The CAGE questionnaire triggers a task for PFS to provide a referral for treatment. (Completed)

**Education:** Registrar education on where to find alcohol screening in the inpatient units. (Ongoing)

Measures

The process for measurement occurs through our DI registry system. Our registrars extract this information and input it into our system, which I review on a monthly basis.

Next Steps

Since November 2023, we have been monitoring the progress of this change and have achieved over 80% compliance for 5 months. We will continue to monitor this change for further improvement opportunities.
BMI

- Missing cases: 114, 94, 128, 114, 111, 118, 116, 105, 122, 125, 107, 111
- % compliance: 64%, 62%, 57%, 57%, 62%, 61%, 60%, 61%, 59%, 51%, 58%, 57%
**BMI**

**Opportunity**

The lack of documentation of patients' height and weight affects care in many ways. Some examples include anesthesia for surgery, antibiotics, vent settings, etc.

**Solution**

**Education:** ED education was sent out on 3/2/23 via daily huddle.

**EMR:** Task added to every patient that comes to the ER on 5/3/23.

**Equipment:** Tape measures and scales were added to the ER on 6/2023.

**Measures**

The measurement process is through our DI registry system. Our registrars extract this information and input it into our system, which I review monthly.

**Next Steps**

**EMR:** ISS is working on pulling height from previous visits to help increase compliance.

**Trauma Flowsheet:** We will add a spot on the written trauma flowsheet for height and weight.
As an ACS-verified trauma center, we must perform community prevention activities based on the mechanism of injuries we see in our program registry.

**Our new TQIP report Identified a few areas we will focus on in 2024.**

Kaweah Health Community Outreach team members perform fall prevention activities.

We will review the pedestrian accidents and look for patterns or opportunities throughout our community. We plan to attend the back-to-school event at the Visalia Rescue Mission. We attended in 2023, provided reflective slap bands to kids, and discussed pedestrian safety measures.

Kaweah’s Health Equity Committee

kaweahhealth.org
Kaweah Health’s - Health Equity Committee

- Identify an individual to lead activities to improve health care equity
- Assess the patient’s health-related social needs
  - Analyze quality and safety data to identify disparities
  - Develop an action plan to improve health care equity
  - Take action when the organization does not meet the goals in its action plan
  - Inform key stakeholders about progress to improve health care equity

KH Current Health Equity Activities

- Health Equity Committee formed – March 2023
  - Identification of responsible individual and committee membership
- Health Equity Committee Charter approved - August 2023
- Review of regulatory health equity standards
  - Joint Commission, CMS and HCAI
- Review, selection and completion of Health Equity assessment tool
  - HSAG’s Health Equity Roadmap
- Review, selection and implementation of Social of Determinants of Health patient screening tool
  - PRAPARE Tool implemented December 2023
  - SDOH HealtheAnalytics Dashboard under construction to monitor implementation and assist with disparities identification
• Application and award of HRSA Rural Care Coordination Grant for Maternal Health
  • Goal of the grant is identify disparities in maternal health outcomes and put interventions in place to address disparities with a focus on the farmworker population
• CalAIM Programs impacting health equity
  • Enhanced Care Management – expanding populations of focus
  • Community Supports – emphasis on housing
• Participation in completion of the Community Health Needs Assessment (CHNA)
• Attendance to NCQA’s Health Equity Summit by Health Equity Committee leadership
  • Sonia Duran-Aguilar, Dr. Omar Guzman, Ryan Gates
• Presenter and Break-Out Session facilitator at the Annual Women Farmworker Women’s Conference Nov. 2023 – Sonia Duran-Aguilar
Infection Prevention
Hand Hygiene Report
June 2024
We are achieving our organizational goal of at least 50% of active Biovigil users pairing to a badge ≥80 hours a month. As predicted, with a greater number of active Biovigil users and paired badge time, hand hygiene compliance rates have decreased. With continued use of Biovigil as a reminder for hand hygiene opportunities, we expect hand hygiene compliance rates to return to ≥95%.

BioVigil Hand Hygiene Performance

Trends in Hand Hygiene

- Increased users of Biovigil has lead to a drop in compliance, this is related to a learning curve for staff in system functionality.
- Night shift has a slight better hand hygiene compliance rate compared to day shift while using the Biovigil hand hygiene monitoring system.
- Day shift has an overall larger volume of hand hygiene opportunities compared with night shift.
- Weekend hand hygiene opportunities account for only 32% of the volume that occurs during weekdays.
- Locations with ≥5 quarter of performance below 95% hand hygiene compliance are: 2N, CVICU, 5T, CVICCU, ED.
- Job categories with consistent performance below 95% hand hygiene compliance are: Certified Nurses Assistants.
- Job categories with low number of hand hygiene opportunities (reflection of low Biovigil usage) are: Respiratory Therapy, and Physicians/Residents/Advance Practice Practitioners (Nurse Practitioners/Physician Assistants).
BioVigil Hand Hygiene Performance

Hand Hygiene Improvement Strategies

• New hire orientation
  • Instructions on how to perform HH
  • Hand hygiene competency for new employees as part of the 48 hour orientation checklist
  • Discussion about the importance of hand hygiene, the Biovigil hand hygiene monitoring system, hand hygiene patient surveys performed in the clinics
  • Viewing the Norwegian Institute of Public Health – Gloves do not replace hand hygiene. The invisible challenge II. Video

• Quarterly audits and trending HH supply processes (refill soap, paper towels, sanitizer) by EVS

• Biovigil electronic HH reminder system in place; manual observations completed in patient care areas where Biovigil is not present

• Hand Hygiene compliance data disseminated to leadership for action; ready to use power points and written materials easily accessible to all staff and leaders for QI work

• Healthcare Associated Infection Quality Focus Team expected a drop in compliance related to increase use of the Biovigil system; as such strategies are heavily focused on supporting leaders and staff in using the system and compliance will be monitored.

• Visual reminders to perform hand hygiene posted in the location throughout the hospital

• Ad Hoc HH Campaigns
  Examples:
  • DUDE VP/CEO videos available on Kaweah Compass
  • Monthly Hi Five Hand Hygiene awards provided to units with greatest Biovigil badge paired time and hand hygiene opportunities
Live with passion.

Health is our passion. Excellence is our focus. Compassion is our promise.

EMR: Electronic Medical Record
HCAHPS: Hospital Consumer Assessment of Healthcare Providers and Systems
VBP Program Overview

- Set forth under section 1886(0) of the social security act
- Ties hospital reimbursement to the quality of care, not just the quantity of inpatient acute care services
- Funded by a 2% reduction from participating hospitals' base operating Medicare Severity Diagnosis Related Group (MS-DRG) payments
- When selecting new measures for the Hospital VBP program the measure must have been originally specified under the Hospital Inpatient Quality Reporting (IQR) Program
- CMS will refrain from beginning the performance period for any new measure until the data on that measure have been posted on Hospital Compare for at least a year
- It is an estimated budget-neutral program (Federal FY 2024 estimated available funds 1.7 Billion)
FY 2024 Domains and Measures CY 2022 Discharges

FY 2026 Action Plans & Next Steps

EFFICIENCY & COST REDUCTION

Medicare Spending
• Operation back in black teams are all working on efficiency and lowering costs

Mortality
• Best Practice team initiative working on standardizing best practices and key performance indicators for COPD, PN, & HF population

CLINICAL OUTCOMES

Hip & Knee Complications
• Nurse Practitioner performs daily patient rounding, collaborates with care team, & patient/family to ensure a safe discharge plan. Current efforts to enhance preoperative education, family/friend support throughout the surgical process and staying up to date to follow evidence-based clinical treatment pathways

PERSON AND COMMUNITY ENGAGEMENT

HCAHPS Survey
• Multidisciplinary rounds, hourly rounding, smile and greet as well as expanded focus on the human connection campaign

More than medicine. Life.
FY 2026 Action Plans & Next Steps

SAFETY

CLABSI
• Reduce line utilization, multidisciplinary rounds, & adherence to safe patient care environment including Hand hygiene practices.

CAUTI
• Reduce indwelling urinary catheter utilization, multidisciplinary rounds, adherence to nurse driven indwelling urinary catheter removal. Compliance with supporting a safe patient care environment including hand hygiene practices.

MRSA
• MRSA nares decolonization, Chlorhexidine gluconate bathing for selected patients or when inserting central lines. Compliance with supporting a safe patient care environment including hand hygiene practices.

C. DIFF
• Advocate for compliance with C Diff testing policy, ongoing communication with care team regarding testing practices, & EMR prompts to aid in decision making for C Diff testing. Compliance with supporting a safe patient care environment including hand hygiene practices.

SEPSIS
• Enhancements to EMR, & Expansion of Sepsis One Hour bundle to inpatient setting. Ongoing education to Medical Staff, Residents & Care Team
The pursuit of healthiness

**KEY**
- Does not meet goal/benchmark
- Within 10% of goal/benchmark
- Outperforming/meeting goal/benchmark
Action Plan Summary

Sepsis
- Focus on 1 hr bundle and expanding to inpatient areas, new order sets/power plans in process with physician stakeholders
- Six Sigma improvement work in process to re-identifying root causes of SEP-1 non-compliance to focus improvement work on the highest contributing factors

Healthcare Acquired Infections
- Super “HAI Brain Trust” Quality Focus Team established, approved by Quality Improvement Committee
- Combine and focus efforts on process metrics that affect the SIRs for CAUTI, CLABSI & MRSA and includes:
  - Line utilization (both central lines and indwelling urinary catheters)
    - Multidisciplinary Rounds (MDR) started January 2024 in ICU, addresses line necessity (less lines=less infections), monitoring line utilization rates to evaluate effectiveness; ICU central line and ICU utilization rates for last 2 months (March & April 2024) have been lower that FY23 SUR. Plan to spread MDRs to DCVICU and Step Down units following Intensivist-Hospitalist transitions.
  - Reinvigorate the Standardized Procedure – medical staff approved criteria for nurses to remove urinary catheters
  - Decolonization rates
    - Nasal Decolonization – Significantly improved from 32% (Jan-June 2023) to 84% (July – Jan 2024). Includes patients who are screened and test positive for MRSA upon admission and not discharged within 24 hours of Mupirocin order (decolonization agent). Next Steps – determining and addressing root causes of patients missed screening, and review of workflow of Mupirocin order to administration processes
  - Skin Decolonization – developing process for skin decolonization through CHG bathing
  - Cleaning effectiveness in high risk areas
    - Quantifying the effectiveness of cleaning during EVS onboarding and annual review with ATP testing; continue to measure cleaning effectiveness through ATP testing in high risk areas (ie. OR’s, ICUs)
  - Hand Hygiene (use of BioVigil system for monitoring)
    - Increase use of BioVigil system, improvement from 31% of active users achieving target badge hours in FY 2023, to 51% (July 23’ to Mar 24’). Next steps, additional tools provided to leaders and staff to support increase use, and evaluation of active users with the denominator
    - Started March 2024 – RECOGNITION PROGRAMS for units/departments that have achieve highest % of staff meeting 80hrs active time (paired) per month!
