

A compassionate nurse for patients. A valuable facilitator for physicians.

Pam Montgomery, RN
Thoracic Oncology Nurse Navigator

For more than 15 years, Pam Montgomery has been part of Kaweah Health, dedicating her career to helping cancer patients and their families.

With her extensive experience in oncology nursing, she has seen firsthand the life-saving difference early detection can make.

As the Thoracic Oncology Nurse Navigator for Kaweah Health's Lung Cancer Screening Program, Pam guides patients through the screening and follow-up process. She works closely with both patients and physicians to ensure next steps happen quickly and smoothly — whether that means additional imaging, monitoring, biopsy, or referral to a pulmonologist or thoracic surgeon. By reducing the time between detecting a nodule and establishing a diagnosis, Pam helps give patients the best possible chance for a positive outcome.

“I’ve seen how important it is to catch this disease early — when we have the best chance of beating it. And I know how important it is to have someone by your side when you’re fighting it.”

– Pam Montgomery

Pam's role is also about support and reassurance. Patients and physicians count on her to connect them with important resources, answer questions, and explain what to expect so they feel informed and cared for at every stage.
