

Telemetry: PAC/PJC/PVC

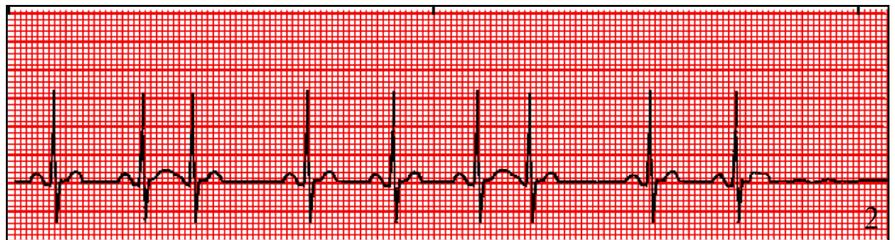

Sinus Rhythm:

Just a baseline to compare to the other strips. Notice that every P wave has a prompt QRS and everything marches out uniformly.

PAC: Premature Atrial Contraction

Pic 2 shows 2 occurrences of PAC (beat 3 and 7) where a P wave comes before it should which makes the preceding T wave look abnormally large. You can tell this is a PAC because the following QRS is identical to the other sinus beats.

PJC: Premature Junctional Contraction

Here we see beat 7 is the Junctional beat. The QRS is not preceded by a P wave, but the width of the QRS is unaffected. The PJC seems very similar to the sinus QRSs but is not identical.

PVC: Premature Ventricular Contraction

Beats 2, 4, 6 and 8 are clearly PVCs. They do not follow a P wave and are very wide complexes compared to the sinus beat QRSs.
